

# 10 Point Trade Guide

## How this works:

- ◆ Just collect points in the direction of the trade, do not consider points in the opposite directions, for instance:
- ◆ Count the point or dismiss the point. If the point does not contribute, then it is just passed over it or set it to zero.
- ◆ For a sell trade you need -7 of -10 points. If the Thick Blue line is down, that is a +1. Just set it aside and collect negative points.
- ◆ For a buy, let's say you have 3 points from the TNT. If the Thick Blue line is pointed up, that is a -1. It is not 3 -1 = 2, but still 3.

## Buy Signal

Chart – Use 30 minute chart (higher hour charts best).  
Buy – 7 positive of 10 positive total points, and at least one positive point from each indicator.  
Take Profit – Set at 5 PIPs.  
Stop Loss – Set at -25 to -35 PIPs based on analysis.

## Sell Signal

Chart – Use 30 minute chart (higher hour charts best).  
Sell – 7 negative of 10 negative total points, and at least one positive point from each indicator.  
Take Profit – Set at -5 PIPs.  
Stop Loss – Set at 25 to 35 PIPs based on analysis.

## Indicators And Price Action

## Indicators And Use Tips

**Order of analysis - Majors-Minors, TNT, then Pressure.**

### #2 TNT Indicator

A confirmatory indicator

4 Rules / Points – 2 of 4 (if others strong) best with 3 or 4 of 4

- +1 – Buy – **Thick Orange** Pointing Up
- 1 – Sell – **Thick Orange** Pointing Down

- +1 – Buy – **Thin Orange** Pointing Up
- 1 – Sell – **Thin Orange** Pointing Down

- +1 – Buy – **Thin Blue** Pointing Down (means up or buy)
- 1 – Sell – **Thin Blue** Pointing Up (means down or sell)

- +1 – Buy – **Thick Blue** Pointing Down (means up or buy)
- 1 – Sell – **Thick Blue** Pointing Up (means down or sell)

### #1 Major (G / R, Market Makers) – Minor (G / B) Indicator

Sets trade timing and direction

3 Rules / Points – 3 of 3 points required

- +1 – Buy – Below The **Red Over-Sold**
- 1 – Sell – Above The **Blue Over-Bought**

- +1 – Buy – Turning Up
- 1 – Sell – Turning Down

- +1 – Buy – Majors and Minors are Crossing
- 1 – Sell – Majors and Minors are Crossing

### #3 Pressure Indicator

The most predictive of trade direction

3 Rules / Points – 1 of 3 points required

- +1 – Buy – Upward (stronger if tighter and steeper) \*  
If Slightly Down (diverging, wide, and weaker)
- 1 – Sell – Downward (stronger if tighter and steeper) \*  
If Slightly Up (diverging, wide, and weaker)

- +1 – Buy – Trending Up (next, ... longer candlestick pressure) \*
- 1 – Sell – Trending Down (next, ... longer candlestick pressure) \*

- +1 – Buy – **Green** Crossing On Top – **Next** Candle is **Green**.
- 1 – Sell – **Red** Crossing On Top – **Next** Candle is **Red**.

\* 70% of the indicator significance AND 70% of trade significance.

Ideally trade with the pressure direction or trend. Trade against the pressure only if it is not steep and with some diverging. This trade method purpose is not so much to win every trade, but begin learning the relationships in and between the indicators.
